My O2 App Account Navigation

___Challenge

No single source of truth existed for the app's information architecture or billing hierarchy.

Customers faced unnecessary friction when switching between products and accounts. My role was to design a more intuitive, product-led navigation experience while working within the existing account and billing structure.

___Outcome

Halved product re-selection from 6 steps to 3 in the redesigned tariff-change and Bolt-On journeys.

___Scope

Product design

Customer experience strategy

UNDERSTANDING THE COMPLEXITY

Built the missing system map

I brought together billing, backend engineering, frontline retail and eCare to understand how accounts, products and billing worked, then consolidated the findings into a shared IA and billing logic map.

The map captured different rules for finance agreements, companion devices and SIM Free Finance, rather than treating everything as one simple product hierarchy.

CHANGING THE MENTAL MODEL

Shifted navigation from accounts to products

I redesigned the experience around the product customers were actively managing, while keeping billing information at account level. This brought the app closer to the product-led web experience and reduced the need to switch between accounts.

CHANGING THE MENTAL MODEL

Simplified the product view

I replaced the carousel with a static product view and removed unnecessary hierarchy and headings, making the active product and key actions easier to find.

CHANGING THE MENTAL MODEL

Removed re-selection

I challenged journeys where customers selected a product, then had to select it again. Actions such as Buy Bolt-On could retain the selected product context and take customers directly to the relevant journey.

A SIMPLE PATH THROUGH THE ACCOUNT

Reduced re-selection from 6 steps to 3

The redesigned multi-product journey reduced re-selection from 6 steps to 3 across tariff-change and Bolt-On flows. Carrying product context through the journey removed unnecessary steps and created a simpler, more consistent experience.
